

Changing the NOF Publish format

Does your site pages look like this: <http://www.yourdomain.com/html/yourpage.html?>

Would you prefer: <http://www.yourdomain.com/yourpage.html>?

Here is how to do it.

First, open NOF 10, then open your site. Now click the publish icon.

Now Click the 'Publish' option at the top of the page. Then select 'Arrange Files' and then 'By Flat'. That will change your site so it does not have the /html/ in it.

You are now done, if you have any questions, please contact us.
