

## Placing Code in NOF

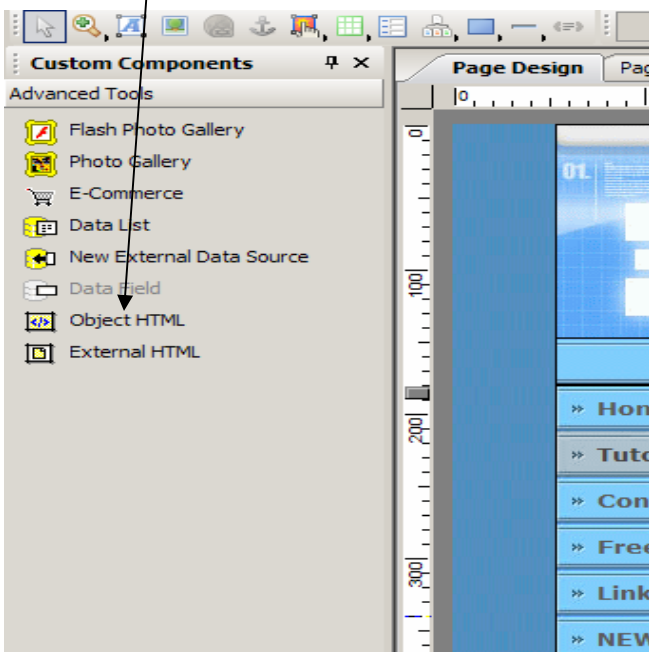

This tutorial will show you the different ways to place code inside of NOF.

The first way is the HTML button. Click the object you want to place the code in, then click the HTML button on the properties panel as shown in the picture below.

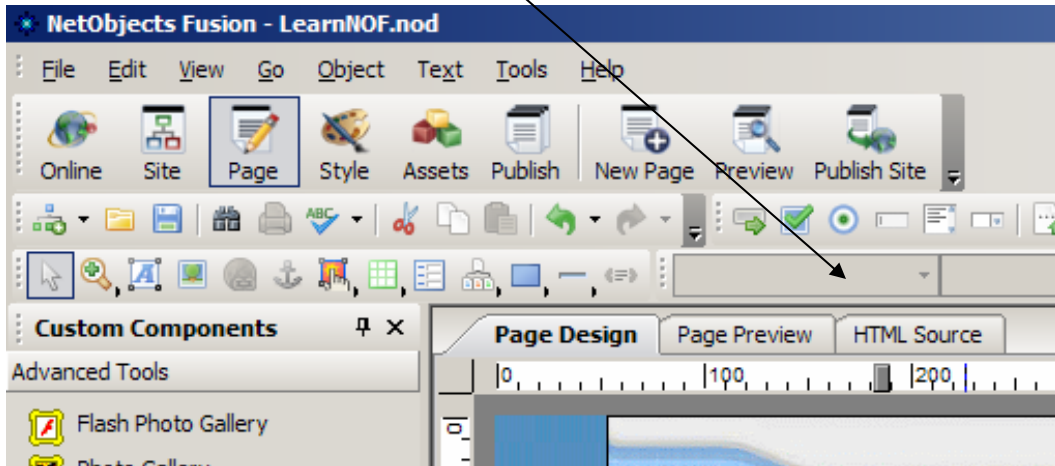

Then place you code in the appropriate area.  
The areas are shown below.

The next way to do it is by using the Advanced tools, and insert HTML icon as the screen shot shows. Just select the text or object you want the code in, and click the icon.

Then the other way to do it is easy, just click on the HTML tab next to the Page Preview Tab, and place your code in there.
