

Verifying File Assets

You may want to do a "verify file assets" before creating your template.

1. In Assets view, from the Assets menu choose Verify All File Assets.

NetObjects Fusion verifies and reports the path status of all files.

- When a file's path information is correct, NetObjects Fusion lists the date and time found in the Verify Status column.
- If a single file is not found, the Verifying Files Used by File Assets dialog appears identifying the missing file and the original path.
- If a folder containing assets is not found, the Verifying Folders Used by File Assets dialog appears identifying the missing folder and its original path.

2. Resolve the paths of any lost files or folders.

- To specify a new path, click Browse and locate the file or folder.
- To skip the lost item and continue verification, click Skip. NetObjects Fusion gives this file Not found status and goes on to verify subsequent files or folders. If the file is due to be published, you receive a publish error.
- To stop the verification process, click Cancel. The verification status of the current file or subsequent files is not updated.

3. When verification is complete, click OK in the confirmation dialog.

You can then delete all the assets that fusion was unable to find by selecting the file, pressing the Delete key.
